Mega-analysis of the Interoceptive Accuracy Scale (IAS) Structure and its Dispositional Correlates

Ana Neves , Magdalena Pfaff, Robyn Scharte , Raquel Nogueira-Arjona, Giulia L. Poerio, and Dominique Makowski

N **> 33,000**

	Interoception	Mood	Psychopathological & Neurodevelopmental Traits	Personality					
				Consc	Open	Extra	Agree	Neuro	Hon-Hum
Cough / Sneeze	+	−	−		+		+		
Bruise / Blood Sugar	+	−	−			+	+		−
Breathing / Heart	+	−		+	+		+		
Hungry / Thirsty	+	−	−	+		+	+	−	−
Wind / Burp	+	−		+	+		+	−	
Urinate / Defecate	+	−	−	+	+			−	
Muscles / Pain	+	−	−	+	+	+	+	−	

Study 1

- Cross-validated analysis suggests a 14-item, **7-pair structure to be optimal**
- IAS reflects correlated yet distinct domains, **not a unidimensional scale**

Study 2

- IAS **positively links** to **adaptive traits**, and **negatively** to **maladaptive traits**
- **Self-perceived interoceptive** ability is **differentiated** across **distinct bodily system**
- **Calls for** the **development** of novel, **context-sensitive**, and **multi-dimensional**, **interoception measures**
